

# **Legal Reliability: Electronic Signatures**

## Create electronic documents that are admissible in court

#### Thanks to stringent legal reliability mechanisms

There is a lot of confusion around documents that are signed electronically. Remove all doubt with Notarius' solutions. Even judges use our solutions to ensure that their documents are legally receivable.

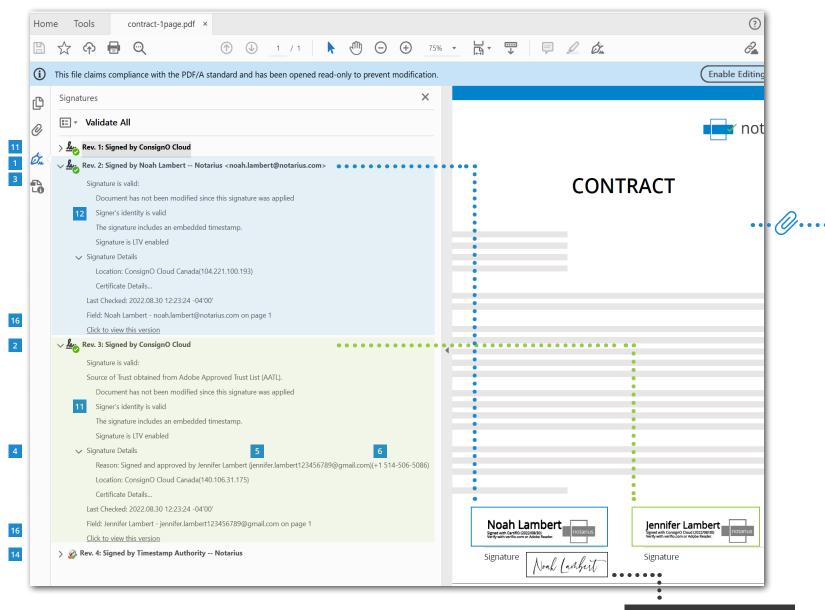

#### The legal reliability of a signed document is based on 4 criteria:

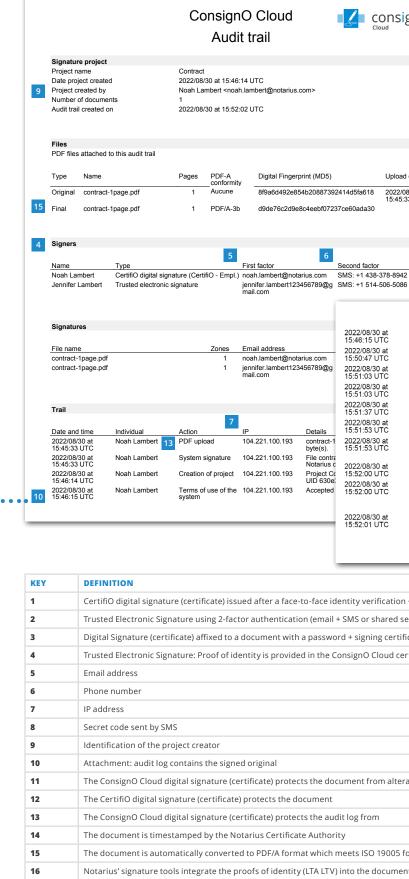

Identity: A way to identify signers

Authenticity: Proof that the signers are actually the people who have signed the document Integrity: Mechanisms for detecting if someone has tampered with the document Longevity: Ability to verify signatures for years to come

# Analysis of a document signed in ConsignO Cloud

### Validate signatures in Acrobat Reader

Signature image : Does not provide any protection to the document

\*Except notaries who are members of the Chambre des notaires du Québec
